

Saira Shafiq

Web Developer — PHP / MySQL / JavaScript

Swat, Pakistan | sairashafiq624@gmail.com | +92 318 9337105 | [LinkedIn](#) | [GitHub](#)

SUMMARY

Full-stack web developer (PHP, MySQL, JavaScript) with hands-on experience building a complete role-based, multi-user system from the ground up. Designed and implemented a three-tier wedding hall booking platform covering authentication, booking workflows, and admin oversight — from database schema through UI. Seeking an entry-level web developer role to apply and grow these skills.

EDUCATION

BS Computer Science

2026

University of Swat, Pakistan — CGPA: 3.87 / 4.0 (through 7th semester)

PROJECTS

Starlight Marquee — Wedding Hall Booking System

Final Year Project · 2025 – 2026

Full-stack multi-role platform — HTML5, CSS3, JavaScript, PHP, MySQL

- Designed and built a role-based access control system with three distinct roles (User, Hall Admin, Super Admin), each with secure authentication using PHP's `password_hash()`/`password_verify()` and session-based routing.
- Built the core relational schema (4 linked tables: users, halls, bookings, payments) and wrote the server-side booking-conflict and pricing logic to prevent double-booking.
- Implemented search and filter functionality so users can browse and shortlist halls by requirements, plus a hall details page that passes menu, decoration, and DJ selections into a pre-filled booking form.
- Built a personal user dashboard for tracking bookings, and a Hall Admin dashboard with a dynamic, JavaScript-driven calendar that colour-codes bookings by status (pending, approved, cancelled) using PHP-generated JSON.
- Developed a Super Admin control panel to manage all registered users, review and approve/suspend new hall listings, and view platform-wide analytics.

Amazon Clone

2024

- Rebuilt the Amazon homepage layout with HTML5 and CSS3 as a self-directed exercise in responsive, static page structuring using Flexbox/Grid.

SKILLS

Frontend: HTML5, CSS3, JavaScript, responsive web design

Backend: PHP, MySQL, RESTful data flows with `fetch()`

Concepts: Role-based access control (RBAC), session management, relational database design, secure authentication

Tools: Git, GitHub, VS Code, XAMPP

Soft Skills: Problem-solving, self-learning, attention to detail
